

**Note to readers with disabilities:** *EHP* strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in *EHP* articles may not conform to [508 standards](#) due to the complexity of the information being presented. If you need assistance accessing journal content, please contact [ehponline@niehs.nih.gov](mailto:ehponline@niehs.nih.gov). Our staff will work with you to assess and meet your accessibility needs within 3 working days.

## **Supplemental Material**

# **The Prevalence of Antibiotic-Resistant *Staphylococcus aureus* Nasal Carriage among Industrial Hog Operation Workers, Community Residents, and Children Living in Their Households: North Carolina, USA**

Sarah M. Hatcher, Sarah M. Rhodes, Jill R. Stewart, Ellen Silbergeld, Nora Pisanic, Jesper Larsen, Sharon Jiang, Amanda Krosche, Devon Hall, Karen C. Carroll, and Christopher D. Heaney

## **Table of Contents**

### Supplemental Methods

Assignment of *spa* types to clonal complexes (CCs)

### Supplemental Tables

**Table S1.** Antibiotics and the concentrations used in antibiotic susceptibility testing

**Table S2.** Description of industrial hog operation (IHO) characteristics and IHO occupational activities reported by IHO worker participants, North Carolina, 2014

**Table S3.** *S. aureus spa*-types that occurred at least twice among adults and children (< 7 yr old) in the industrial hog operation (IHO) group and the community referent (CR) group, North Carolina, 2014

**Table S4.** *S. aureus spa* types for each participant with discordance in *spa* types in their two nasal swab *S. aureus* isolates, North Carolina, 2014

#### **Additional Files**

##### **Supplemental Code and Data ZIP File**

**Excel File Table S1.** Heat map of antimicrobial resistance, *scn* gene status, and *spa* type for *S. aureus* isolates for all participants by group.
